

Landscape Tree Survey
Northeast Corner of Westchester and Chesterfield
Camp Springs, Maryland

Westchester Drive

Chesterfield Drive

Very low branches obscure the front of the house, creating a security problem.

Could be limbed-up a bit.

Line of mature Red Maples is an attractive addition to this part of the block. In addition, the trees provide afternoon shade for houses.

Limbed up and cleaned out for a high "cathedral ceiling" over the garden.

Tall stand of closely planted trees provides natural green backdrop for landscape and habitat for birds.

Low limbs need pruning. Could also use a clean-out.

Extensive shallow root systems of Silver Maples invade flower and vegetable beds. Require periodic root pruning to keep them in check.

Should be pruned to protect carport and toolsheds.

Recommend replacement of Pears and Maples with smaller trees or shrub to allow more light to reach flower beds.

Spruce provides good winter cover for birds.

Heavy root competition and poor soil in this area. One of these trees (probably the Sycamore) should eventually be removed.

Surface roots put stress on nearby lawn.

Four large Maples growing this close together produce heavy shade and root competition, making it difficult to maintain.

Evenly spaced maples create a nice effect for the block when they are pruned for a high canopy. Trees close to curb require extra watering and fertilization to stay healthy.

Tall Oaks so close to house poses a safety problem.

These areas will be heavily shaded as nearby Silver Maples mature.

Key

- Very large tree, ht. 70-100', spread 35-50'
- Large tree, height 40-70'
- Medium tree, height 25-40'
- Small tree, height less than 25'
- Shade at 10:15 A.M. on 21st of June

54 Trees Total
